A-0280 WETTING AGENT

A-0280 Wetting Agent is a nonionic surfactant that, when used in a cultured marble matrix, enhances the wetting of the filler particles by the resin and significantly improves the adhesion of the marble matrix to the gel coat surface.

LIQUID PROPERTIES

Appearance	Transparent, Pale Yellow Liquid
Specific Gravity, 77°F.	1.07
Weight per Gallon, 77°F.	8.88 lbs.
% Volatiles	< 0.1%

APPLICATION

A-0280 Wetting Agent should be mixed into the marble resin before the filler is added at a recommended level of 0.25% of the resin weight (4 ounces of A-0280 to 100 pounds of resin). Mix thoroughly with the resin before adding fillers, then proceed to mix and pour the marble in a normal manner.

The A-0280 will enhance the wetting of the filler particles by the resin and also will strengthen the bond between the matrix and the gel coat by improving the wetting of the gel coat surface by the resin in the matrix mix.
